

UNIFOS® SD

Soaking auxiliary.

Description: Alkaline compound for the hides soaking process.

Aspect: White to slightly grayish powder.

Concentration: >96%

pH (sol. 10%): 10 – 13

Charge: Anionic

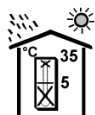

Application: Soaking

Properties: The **UNIFOS® SD** is a low-foaming surfactant which is used to accelerate the soaking of salted and brined raw stock.

The **UNIFOS® SD** promotes the penetration of water and relaxes the tension between the fibrils of the skin. It has a smooth degreasing effect, resulting in uniform cleaned pelts, without foam formation in the water waste treatment.

Use guideline: We suggest to apply from 1,0 to 1,3% of the **UNIFOS® SD** in fresh or brined hides. We recommend applying **UNIFOS® SD** in combination with enzymatic degreasing auxiliaries like our **UNIZIME® BH**, because synergistic effects can be obtained which lead to excellent results. The soaking bath volume can vary from 50 to 100% according the conservation status of the hides and equipments used.

Storage: We recommend keeping the product sealed in the original package, in a clean and controlled environment, avoiding extreme temperatures.

Package: 25 Kg plastic bags in 1.000 Kg pallets.
